

# DevOps Engineer

APP for OPS

**Experience : 5 - 10 Yrs**

**Mandatory Skills : AWS, Linux, Jboss/Wildfly, Git, Jenkins, Terraform**

**Educational Qualification : Any full time Graduate in computer science background**

Wooqer ([www.wooqer.com](http://www.wooqer.com)) is One App for All Ops that enables businesses and teams to Create, Find and Discover WorkApps that gets the job done.

Building on existing success, and envisioned scale of growth, there is a need for additional expertise in ensuring stability, reliability, and recovery of our platform used by businesses across the world that are using our Creator Tool, SuperApp and Marketplace.

We are on a hyper-scale mode and looking for DevOps Engineers who want to take Challenges head-on, Scale Products Globally, Work with Industry Leaders, Grow and Lead Young.

## Your behavior and attitude:

- Is obsessive about improving the reliability of systems in production and QA environments, will perform automation to bring in deployment efficiencies. Will manage event handling proactively, and is hyper responsive to incidents.
- Will have a go getter, "ownership" attitude, exhibit high level of technical competency, and will provide mentoring to juniors and peers.
- Will possess a strong willingness and ability to learn technology and lead others
- Will have a collaborative mindset and exhibit great teamwork, experienced in working in a fast paced environment
- Will be transparent, communicative, patient, curious, research-minded and data-informed
- Will have abundant opportunities to grow professionally while being challenged with tough problems to solve.

## What you'll achieve

- Build and execute SOPs, drive application and infrastructure stabilization for 100% uptime and platform availability for customers
- Build reliability and fault tolerant infrastructure to minimize failures and efficiency recovery procedures
- Be available On-call, Incident management and root cause analysis
- Investigate and nail down the root cause of problems with precision and take steps to build resilience across the platform.
- Architect DevOps infrastructure and deployment/recovery processes, set up microservices architecture, zero downtime, pre-production environments, and spin up instances and containers for testing environments.
- Build, design, deployment, and ability to maintain continuous integration and continuous delivery process using tools like Jenkins, maven Git, etc.
- Implement development, testing, automation tools, and IT infrastructure

### About your experience and skills:

- Utilize Information Systems skills and 5+ years of IT experience with RedHat, Apache, Tomcat, ModJK, JBoss Application Server System
- Strong knowledge of server performance tuning involving Core Dump Analysis, Thread Dump Analysis and Memory leaks to analyze the uneven server crashes
- Involved in creating and configuring profiles, clusters, nodes, node agents for JBoss/Wildfly Application Server
- Experience performing JBoss Application Server Administration tasks such as installation, configuration, monitoring and performance tuning
- Strong background in Linux/Unix Administration is a must
- Expertise in managing AWS cloud environment
- Scripting knowledge towards Bash or Python
- Sound knowledge of MySQL, Elasticsearch will be an added advantage
- Strong documentation and presentation skills
- Responsible for build, design, deployment, and ability to maintain continuous integration and continuous delivery process using tools like Jenkins, maven Git, etc.
- Responsible for maintaining application uptime
- Implementing various development, testing, automation tools, and IT infrastructure
- On-call, Incident management and root cause analysis
- Managing periodic reporting on the progress of tasks to the management
- Ability to work independently, as well as part of a global support team with minimal supervision

# About Wooqer

## Our Journey

Wooqer is a one of its kind journey where profitability comes first. With customers who genuinely get value from the product and are willing to pay for it, scale is a natural next step. And that's the next phase of the Wooqer journey. We are preparing for growth.

The already available Creator tools that users love to use and the hundreds of apps users have self created on the Wooqer Super App form the foundation for our growth. Global expansion, New selling methodologies, Marketing focus and a B2B apps marketplace shall make it happen.

At Wooqer, Intelligence is hygiene and Execution capability a necessity. We build things right and blow customer expectations away, every single time. We chase crazy big goals, take full ownership, deliver excellence and celebrate our successes. We pay attention to detail and are right..most times as we simplify work for self and users. We are building the future. Today. And last but not the least, we are frugal. After all, we are still building a profitable company.

## Our Leadership

### Vishal Purohit

As Founder and CEO of Wooqer, Vishal leads the product vision and organization. Vishal is a serial entrepreneur with multiple successful exits. Vishal has held Technology, Sales, Operations, Chief Executive and Advisory roles in his journey to Wooqer. Vishal holds a BE in Comp. Sc from Univ of Pune
